

THE WHITE HOUSE
WASHINGTON

August 15, 1978

I extend a warm welcome to the delegates and guests at this Eighth International Congress of the International Society of Neuropathology.

Because of its specific concern with the diseases of the nervous system, neuropathology is a science of immediate and urgent importance to mankind.

The attainment of new knowledge in all of the neuro-sciences has accelerated tremendously in recent years, and I am confident that we are on the threshold of a series of major medical breakthroughs in the diagnosis and treatment of nervous system diseases.

I applaud the worldwide cooperation in evidence at these sessions, and I hope your deliberations will stimulate dramatic advances in this vital area.

Jimmy Carter
